CROMATOGRAFÍA DE AFINIDAD

Es una cromatografía que utiliza la alta especificidad de las reacciones biológicas del tipo antígeno-anticuerpo, hormona-receptor...

Para ello un ligando de afinidad se une al soporte de la FE. Cuando la muestra atraviese la columna solo se retendrá la sustancia capaz de reaccionar con dicho ligando.

Una vez concluida la separación hay que provocar la salida de la sustancia que dio la reacción específica.
